

EVENTSHARK FIELD GUIDE

The Production Brief

How to plan one shoot that yields 30+ social-ready assets.

THE UPSTREAM PROBLEM

Hiring more editors won't fix a content shortage. The ceiling is set on the shoot day.

01

When a team opens several social video editor roles at once, the assumption is that the constraint is editing capacity. Usually it isn't. The real constraint is upstream: how much usable raw material each shoot produces. Film one long interview with no plan for how it gets cut, and even a great editor is rationing scraps. Film against a brief built for distribution, and one session becomes a month of content.

This is the working method EventShark uses on recurring social engagements for B2B software teams, including the monthly bundles we produce for clients like AirOps and Ghost. It's built so a marketer can hand it to any crew, or run a shoot in-house, and reliably walk away with 30 or more finished assets.

1	30+	4-6	9:16
SHOOT DAY / SESSION	FINISHED ASSETS	PEOPLE ON CAMERA	BUILT VERTICAL FIRST

The shift: from one hero video to a content engine.

THE OLD MODEL	THE CONTENT-ENGINE MODEL
Shoot first, figure out the clips later.	The brief defines the clips before anyone arrives.
One long interview, filmed once.	Each answer filmed as a standalone, postable thought.
Footage used once, then archived.	A tagged library you re-cut all quarter.
Vertical treated as an afterthought.	Framed for vertical first, horizontal in parallel.

SECTION 02

02

Before the shoot: the brief

Fill these in and share them with the crew at least 48 hours out. Each block protects specific downstream assets. The goal isn't a longer shot list, it's a sharper one where every setup already knows what it becomes.

BLOCK	WHAT YOU DEFINE	PROTECTS
The hook	The single takeaway a viewer should leave with. One sentence. Everything ladders up to it.	EDITORIAL FOCUS
Audience & platform	Who each asset is for and where it lives: LinkedIn feed, Reels, Shorts, sales, site.	RATIO, LENGTH, HOOK
People to prioritize	3–6 named people, their role, and the one idea each owns. Note who is cleared on camera.	CASTING, LOWER-THIRDS
Format & setup	Sit-down, standing, or man-on-the-street, and who asks the questions. Match it to the room.	PACING, TONE
Guardrails	Anyone you can't film, competitors to avoid naming, topics that are off-limits.	CLEAN, ON-MESSAGE FOOTAGE

One hook, written well, does the most work. “We help teams ship video faster” is a topic. “The fastest way to turn one idea into a week of posts” is a hook. The second tells the editor what to keep and the viewer why to stop scrolling.

THE CENTERPIECE

03

The interview flow

The highest-leverage thing you capture is a customer story, and it's the easiest to get wrong. Run every customer interview on these four beats, in order. Lead with the core question, then use the prompts only if you need to draw the answer out.

01 Problem CONTEXT & BACKSTORY

CORE QUESTION

"What problem were you dealing with before working with us?"

Then, if needed: What wasn't working at the time? · What made this a priority to solve? · How was it affecting your team, customers, or day-to-day work?

02 Solution HOW THE PROBLEM WAS SOLVED

CORE QUESTION

"How did our solution help address that problem?"

Then, if needed: What specifically changed after implementation? · What stood out during onboarding or early use? · Which features or aspects made the biggest difference?

03 Impact RESULTS & OUTCOMES

CORE QUESTION

"What's been the biggest impact since solving that problem?"

Then, if needed: What does this enable you to do now? · Any tangible results or improvements you've seen? · How has this changed things for your team or organization?

04 Experience WORKING TOGETHER

CORE QUESTION

"What has it been like working with our team?"

Then, if needed: How would you describe the overall experience? · What stood out about the partnership or support? · Would you recommend us to others, and why?

SECTION 04

04

Question banks by type

Not every shoot is a testimonial. Five rules carry most of the weight: open with name and role; keep questions open and never coach a product name-drop; phrase each so one answer stands on its own; match the format to the room; and make sure every question ladders up to your one hook. Swap the bracketed terms; pick four to six per person.

General / story

Flexible openers that almost always land a usable clip.

1. What's your name and what do you do?
2. What's the biggest shift you've seen in [category] this year?
3. What's something most people get wrong about [topic]?
4. What's a belief about [industry] others might push back on?
5. If you were starting in [role] today, what would you focus on first?

Executive / leadership

Aim for a point of view, not a status update.

1. Where is [category] heading over the next two to three years?
2. What bet are you making that the market hasn't caught up to?
3. What's a piece of conventional wisdom in your space you think is wrong?
4. What was the hardest tradeoff your team made this year?
5. What does winning look like 12 months from now?

Product launch

Keep it open. Let them explain the value in their own words.

1. In one sentence, what does [product] do?
2. What were you hearing from customers that led to building this?
3. What can someone do today that they couldn't last week?
4. Who is this for, and what changes for them?
5. What's the one thing you most want people to try first?

Subject-matter expert

Tactical and specific. These earn trust with a technical audience.

1. Walk me through how you actually do [process] day to day.
2. What mistake do you see teams make over and over with [topic]?
3. What's a tactic working right now that more people should steal?
4. What tool, habit, or framework changed how you work?
5. If someone had 30 days to improve [metric], where should they start?

Street / man-on-the-street

Pick ONE question. The host asks on camera; the crew asks the same to 8–12 people off camera. In post, the host clip is the hook and answers cut in underneath.

1. What's the most overrated trend in [industry] right now?
2. [Tool A] or [Tool B], and why?
3. Finish the sentence: the future of [category] is ____.
4. What's one thing you wish [audience] understood about [topic]?

SECTION 05

Capture standards

05

On the day, a few standards give the edit enough options to reach 30+ assets: clean angles to cut between, room to reframe for vertical, and footage that still holds up months later. You won't see the gear in the brief; you'll see it in how the footage performs.

STANDARD

WHY IT MULTIPLIES ASSETS

Multi-camera by default

A second angle hides cuts, so one long answer becomes several clean clips. The simplest multiplier on the day.

Frame for vertical, capture for both

Shoot with the vertical crop in mind and room to reframe wide. No answer gets stranded in one format.

Every answer a standalone thought

Reset between takes for clean in and out points. That's what makes a response postable without setup.

Cinema-grade, quietly

Cinema cameras and flat color profiles give the edit latitude to grade and reframe months later. You see it in how the footage holds up, not in the brief.

SECTION 06

06

One session, 30+ assets

How a single structured session breaks down. These counts reflect what we actually deliver on a half to full day. The brief and the question flow are what make them repeatable rather than lucky.

OUTPUT	TYPICAL COUNT	BUILT FROM
Hero edit (recap or brand piece)	1	Strongest moments + b-roll, story-structured
Vertical social clips (15–60s)	12–20	Self-contained answers, hook-first
Quote-led cutdowns for LinkedIn	6–10	Standout soundbites + captions
Testimonial / talking-head clips	2–4	The four-beat interview flow
B-roll library clips	8–12	Tagged environment + product footage
Photo selects	15–30 rush 50–100 full	Pulled and graded from the same day

Both orientations, every time. Social clips are delivered vertical for feed and Reels, plus horizontal for YouTube, sales, and the site. Capturing with room to reframe is what lets one answer live in three places. Every package also includes the raw footage, organized and archived.

SECTION 07

07

In post, and making it last

Capture sets the ceiling; post is where 30 assets get finished consistently and then deployed so they actually last. Every clip moves through the same workflow, so the output reads as one brand rather than thirty one-offs.

01 Organize by moment

Footage is reviewed in full and grouped by question or beat, so the strongest material surfaces first.

03 Studio-grade audio

Dialogue is cleaned and leveled so every clip sounds consistent and professional.

05 One cohesive look

Consistent color grade and brand-aligned captions across every asset, with light, restrained sound design.

02 Hook-first assembly

The most engaging moment leads. The first few seconds are built to stop the scroll.

04 Captions, human-checked

Auto-generated, then corrected by an editor. Keywords highlighted for silent viewing.

06 Rolling delivery

Assets ship as they finish, two to three a week, not in one dump. Two revision rounds on every asset.

Then make 30 assets last a quarter.

A pile of clips isn't a strategy. Sequence them. Lead with the hero edit, then release two to three social clips a week, each anchored on one idea from the shoot. Pair quote cutdowns with the photo selects for static posts, hold a few of the strongest clips for paid, and feed the b-roll library into everything you make between shoots. Done this way, one capture day covers four to six weeks of feed without anyone scrambling for content.

USE IT YOURSELF, OR HAND US THE CALENDAR

Run your next shoot against this brief, or give us the dates and we'll produce the whole pipeline, structured to deliver 30+ assets per session on a recurring monthly cadence. Either way, the bottleneck moves off your editors and onto a plan.
